PROFESSIONAL SUMMARY

Risk and AI business analyst with 4+ years across payments risk, fraud prevention, and analytics strategy in high-volume transaction environments. Skilled in SQL, Python, Tableau, Power BI, and Looker, with a track record of translating complex transactional data into predictive models, risk controls, and executive-ready insight. Experienced in moving teams from heuristic rules to model-driven mitigation, designing A/B tests, optimizing data pipelines, and delivering in Agile and Scrum environments. Builds analytical products that help payment, fraud, and operations teams move from noisy signals to confident, owner-assigned action.

CORE SKILLS

Programming & Data Analysis: Python, SQL, R, Java, C, C++, Advanced Excel, Pandas, NumPy, SciPy, Statistical Analysis, A/B Testing, Hypothesis Testing, Exploratory Data Analysis, Data Wrangling, Data Pipeline Optimization

AI & Machine Learning: Predictive Modeling, AI-Driven Forecasting, Feature Engineering, Model Evaluation (Precision / Recall / F1), Scikit-learn, Random Forest, PyTorch, LangChain, Generative AI, LLM Tools, Prompt Engineering, Heuristic-to-Model Migration

Risk, Fraud & Compliance: Transaction Monitoring, Anomaly Detection, Rule-Based and Model-Driven Risk Controls, Root Cause Analysis (RCA), AML / KYC Awareness, Chargeback and Dispute Analysis, Blockchain Analytics, Identity Verification Data Analysis, Key Risk Indicator (KRI) Monitoring

Visualization & BI: Tableau, Power BI, Looker, Streamlit, Plotly, Matplotlib, Seaborn, Lucidchart, Dashboard Design, KRI Reporting, Executive Presentation Design

Business Analysis & Delivery: Requirements Gathering, Process Mapping, Stakeholder Management, User Stories, Gap Analysis, Business Process Optimization, Cross-Functional Collaboration, Executive Reporting, Agile, Scrum, Kanban, SDLC, UAT

Databases & Cloud: PostgreSQL, MySQL, Microsoft SQL Server, Oracle Database, Snowflake, Google BigQuery, Amazon Redshift, Databricks (Delta Lake), Apache Hive, MongoDB, DynamoDB, Apache Cassandra, Pinecone, Milvus, Qdrant, Chroma, pgvector; AWS, Microsoft Azure, Google Cloud Platform, AWS Bedrock, Azure OpenAI Service, Vertex AI Model Garden, IAM, Azure Key Vault

Tools & Platforms: Jira, Zendesk, Confluence, Git, Salesforce CRM, Google Workspace, React, Vite

Spoken Languages: English, Telugu, Hindi

PROFESSIONAL EXPERIENCE

Strategy & Analytics Business Analyst

Stripe | New York, NY | Sep 2024 - Present

- Analyze complex financial datasets using SQL and Python to identify revenue opportunities and optimize payment-routing strategies.
- Develop Tableau and Looker dashboards to track KPIs and monitor product performance across multiple regions.
- Build predictive models and AI-driven forecasts to anticipate transaction volumes and identify emerging market trends.
- Design and execute A/B tests and statistical analyses to validate product strategies and inform data-driven decision making.
- Collaborate with engineering teams in Agile and Scrum environments to streamline data pipelines and eliminate manual reporting processes.
- Present findings and strategic recommendations to senior leadership with clear, actionable insights.

CAP Analyst - Concession Abuse Prevention

Amazon | Hyderabad, India | May 2023 - Oct 2023

- Queried large-scale transactional datasets using SQL and Excel to detect fraud patterns and identify unauthorized-access behaviors.
- Built Tableau and Power BI reports to proactively monitor security risks and support threat-detection operations.
- Managed high-volume case queues and escalated security tickets through Jira and Zendesk, ensuring timely resolution.
- Applied root-cause analysis and risk modeling techniques to reduce exposure to account takeovers and social-engineering attacks.
- Partnered with cross-functional teams to enhance automated fraud-detection workflows and improve analyst efficiency.
- Maintained process maps, technical documentation, and compliance audit materials to ensure regulatory readiness.

Payment Risk Analyst

Coinbase | Hyderabad, India | Sep 2020 - Apr 2023

- Analyzed fraud risk across ACH, card, and real-time payment rails using SQL and transaction-monitoring systems.
- Designed and refined risk controls, transitioning teams from heuristic-based rules to model-driven mitigation strategies.
- Investigated fraud vectors using identity-provider data, Python scripts, and blockchain analytics to understand attacker methodologies.
- Measured risk-strategy performance through precision, recall, Looker, and Tableau reporting.
- Collaborated with Product and Engineering teams to strengthen fraud prevention while preserving seamless customer experiences.

SELECTED PROJECTS

Portfolio: ad3.org | Source code: github.com/bennyhin777-ui

Payment Risk Command Center

React, Vite, real-time risk scoring, dashboard design | github.com/bennyhin777-ui/payment-risk-command-center

Interactive command center simulating a live payment risk operations desk. Monitors portfolio exposure across card, ACH, and real-time rails with searchable transaction decision queues, risk-signal trend charts, and exposure breakdowns. Analysts can filter by time period, triage by risk score, and export reports for case-management integration. Simulated outcome: 18.4% fraud loss avoided at the recommended operating point.

Fraud Policy Simulator

React, Vite, scenario modeling, tradeoff analysis | github.com/bennyhin777-ui/fraud-policy-simulator

Policy threshold simulator that lets risk teams preview the impact of changing auto-review thresholds before pushing to production. Shows projected legitimate approval rates, fraud loss prevented, and review case volume, making the cost-benefit tradeoff of every control decision visible and quantifiable. Simulated outcome: 3.1% approval lift after tuning.

Requirements-to-Risk Analyst

React, Vite, AI-assisted analysis, requirements engineering | github.com/bennyhin777-ui/requirements-to-risk-analyst

Human-in-the-loop AI tool that transforms stakeholder meeting transcripts into structured deliverables. Detects intents, surfaces risk tensions, and generates user stories, risk controls, and clarification questions, giving business analysts a ready-to-review packet instead of a blank page. Surfaced 42 requirement gaps from a single transcript.

KRI Early-Warning System

React, Vite, KRI monitoring, operational risk | github.com/bennyhin777-ui/kri-early-warning-system

Early-warning system for operational risk that tracks 7 leading indicators with threshold-based breach detection. Each indicator is owner-assigned with health-level alerts, trend tracking, and action digest generation, ensuring small issues are routed to the right person before they escalate.

Regulatory Compliance Copilot

React, TypeScript, Tailwind, Supabase | github.com/bennyhin777-ui/Regulatory-Compliance-Copilot

AI-assisted compliance copilot that helps teams interpret regulatory requirements, map controls to obligations, and surface gaps before audits. Built with Supabase for persistent state and a TypeScript and Tailwind front end.

EDUCATION

Master of Science, Project Management (Information Technology)

Saint Francis College | GPA: 3.9 | Graduated with Honors | Capstone: Agile Methodologies

CERTIFICATIONS

- Google Project Management: Professional Certificate - Google
- IBM Business Analyst Professional Certificate - IBM
- Enterprise Risk Management Specialization - University System of Georgia
- Forensic Accounting and Fraud Examination Specialization - West Virginia University
- Financial Risk Management Specialization - New York Institute of Finance

PUBLICATION

A Mechanism Used to Predict Diet Consumption and Stress Management in Humans Using IoMT - IEEE ICCT 2023.

Co-authored a predictive analytics framework using Internet of Medical Things data to distinguish normal eating from stress-induced eating patterns.
